College Name : St.Theresa's Arts and Science College for Women.

University : Annamalai University

Introduction :

CRICKSTATS is a Salesforce-based application designed to track, manage, and analyze cricket players' performance on a match-by-match basis. The system uses custom objects, relationships, dashboards, and automation tools to provide structured performance insights. It enables coaches, analysts, and administrators to record player statistics, generate reports, and support strategic decision-making.

Requirement Analysis Phase :

- Login
- Enter Player Data
- Record Match Performance

- Generate Reports
- Analyse Results
- Decision Making

Functional Requirements :

FR No	Requirement
FR-1	Player Registration
FR-2	Match Performance Entry
FR-3	Dashboard Generation
FR-4	Report Creation
FR-5	Flow Automation

Non-Functional Requirements (NFRs) CRICKSTATS

NFR-1 Usability :

The system should be easy to understand and use by coaches, managers, analysts, and admins without requiring technical training.

NFR-2 Security :

The system must protect sensitive player data from unauthorized access.

NFR-3: Reliability

The system should function correctly without failure and store data accurately.

NFR-4: Performance

The system should respond quickly and handle large volumes of data efficiently.

NFR-5: Availability

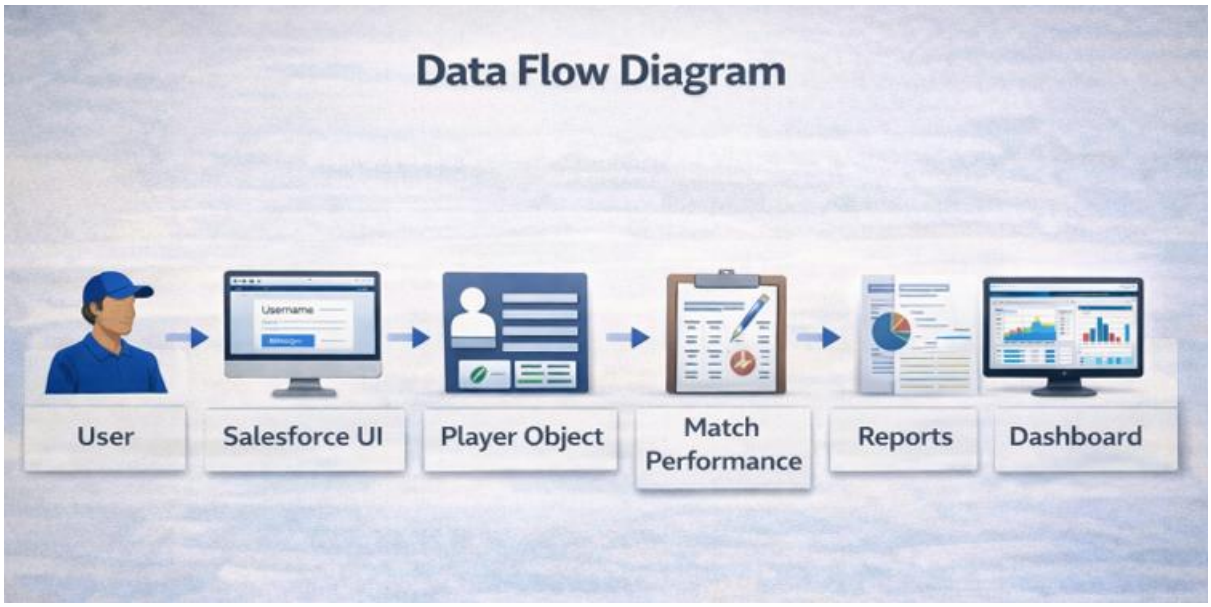
The system should be accessible whenever users need it.

NFR-6: Scalability

The system should support increasing numbers of users, players, and records.

Data Flow Diagram :

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard



Technology Stack :

Layer	Technology
Frontend	Salesforce Lightning
Analytics	Reports & Dashboards
Automation	Salesforce Flows
Backend	Salesforce Objects
Database	Salesforce Cloud

Project Design Phase :

The CRICKSTATS system effectively addresses the key challenges faced in traditional cricket performance management. Earlier, most player and match data were maintained using manual records, which were time-consuming and prone to errors. This issue has been resolved by implementing an automated system through Salesforce, which ensures accurate and efficient data entry and management. The problem of data loss, caused by improper storage and lack of backups, is overcome by using secure cloud storage that safely stores all information and allows easy retrieval. Poor analysis of player performance, due to scattered and unorganized data, is addressed through interactive dashboards that present clear visual insights and reports. Thus, CRICKSTATS successfully bridges the gap between existing problems and modern technological solutions.

Proposed Solution

- Custom objects (Player, Match Performance)
- Roll-up summaries
- Lightning App
- Automated flows
- Secure access

Solution Architecture :

Architecture Layers

- Presentation Layer (Lightning UI)
- Data Layer (Objects)
- Analytics Layer (Reports)

Project Planning :

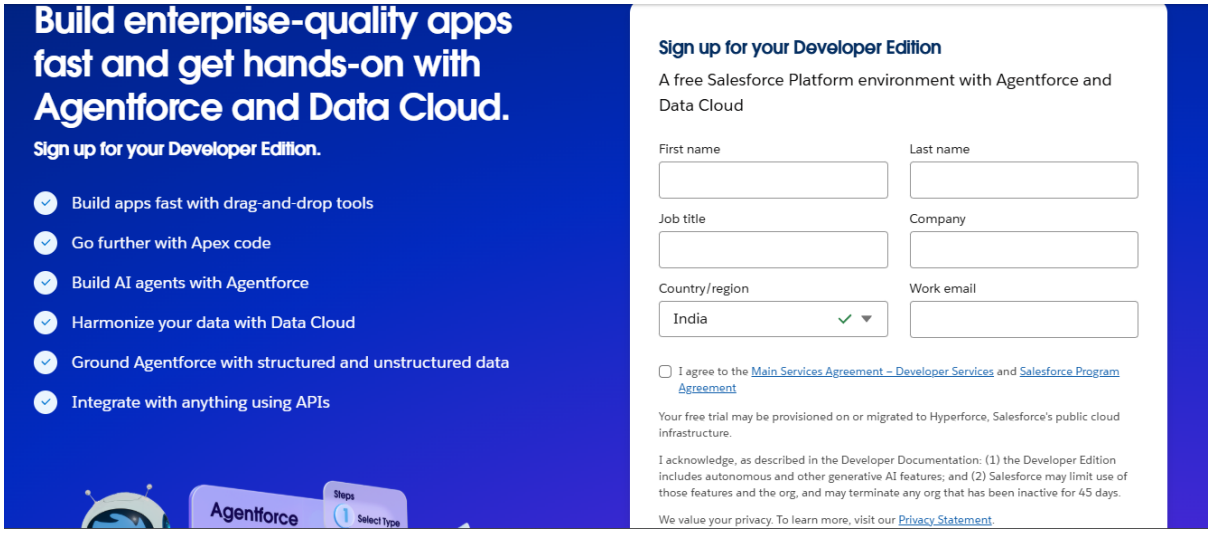
- Agile-based execution

- Object creation → automation → reporting
- Sprint-wise development

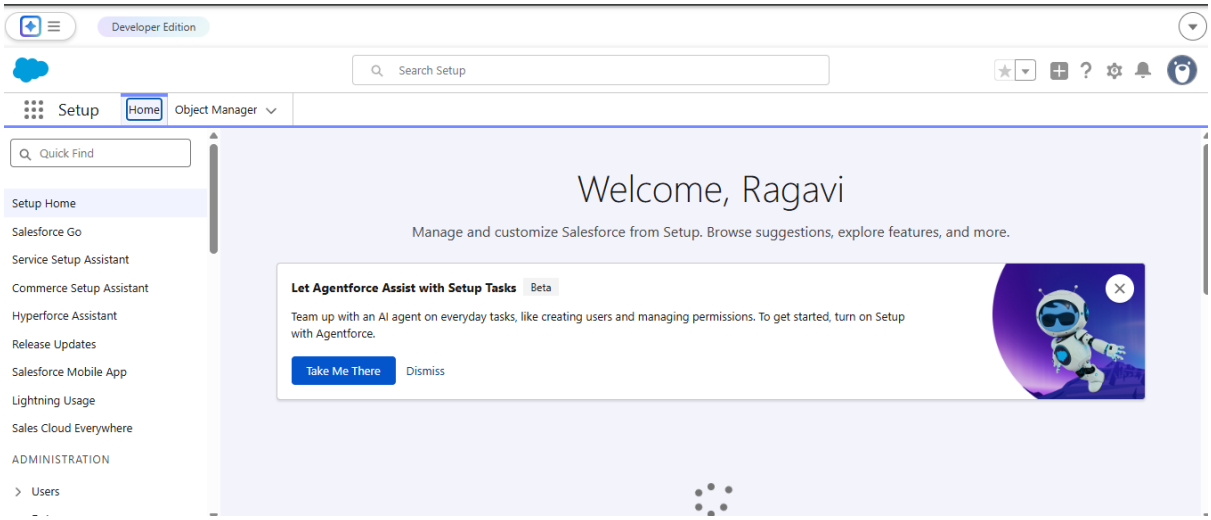
Project Development Phase :

Milestone 1 - Salesforce developer account creation :

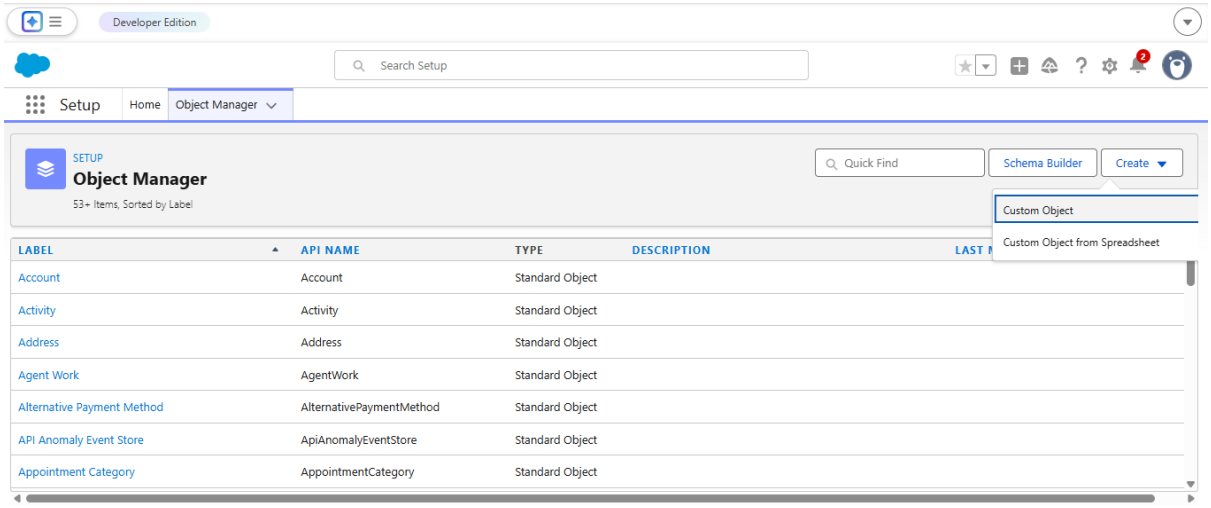
Activity 1: Creating Developer Account:



Activity 2: Redirect To Your Salesforce Setup Page:

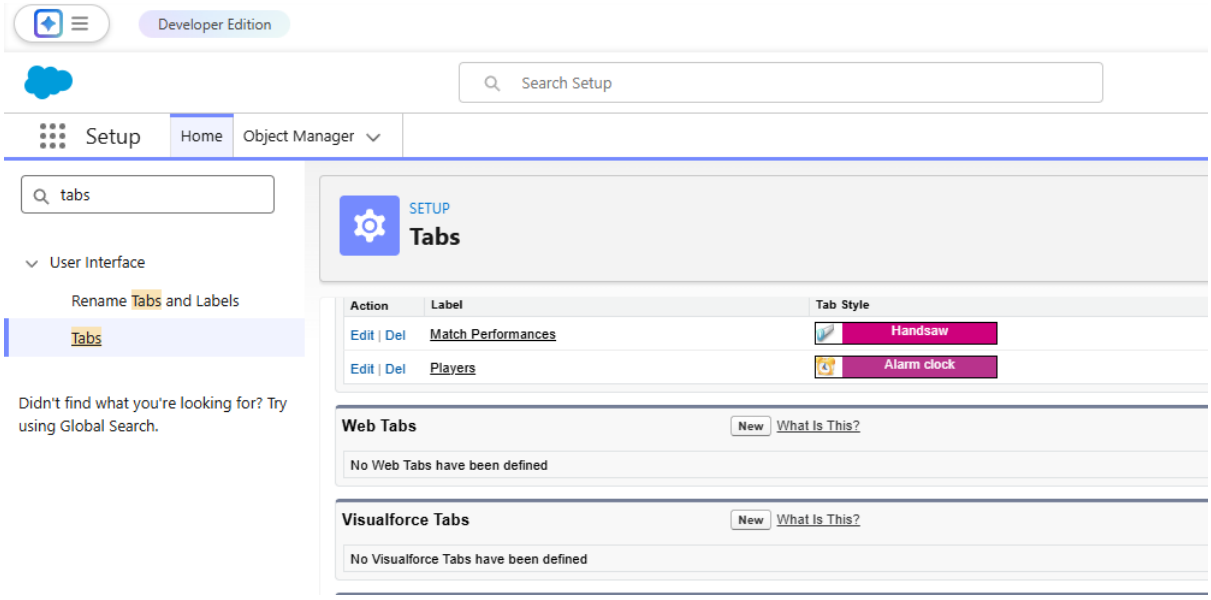


Milestone 2 - Object Creation :



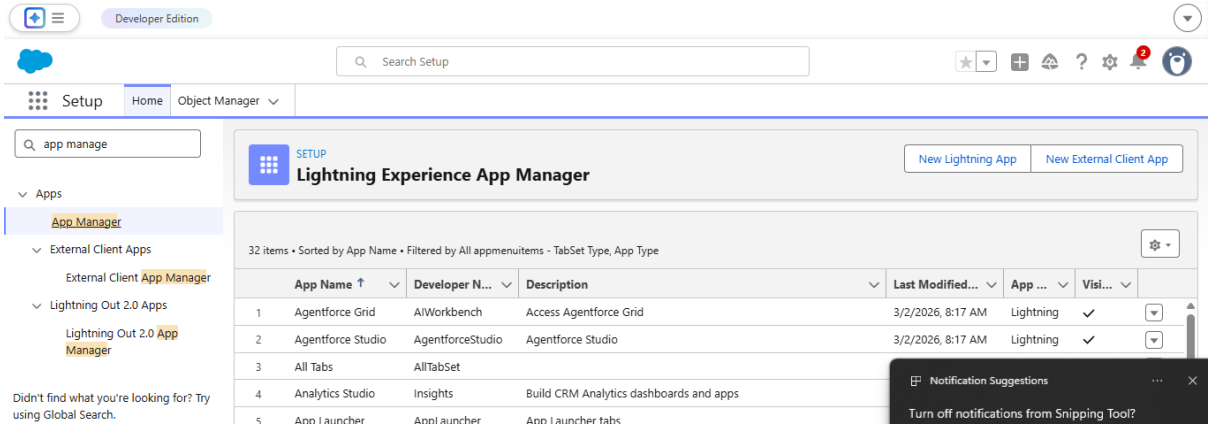
Milestone 3 - Tabs Activity 1 :

Custom tabs creation



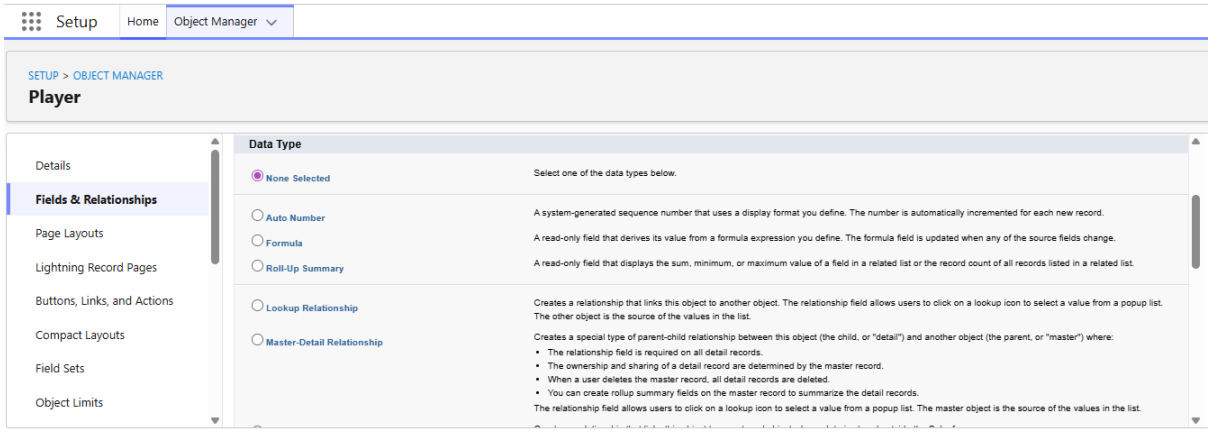
Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

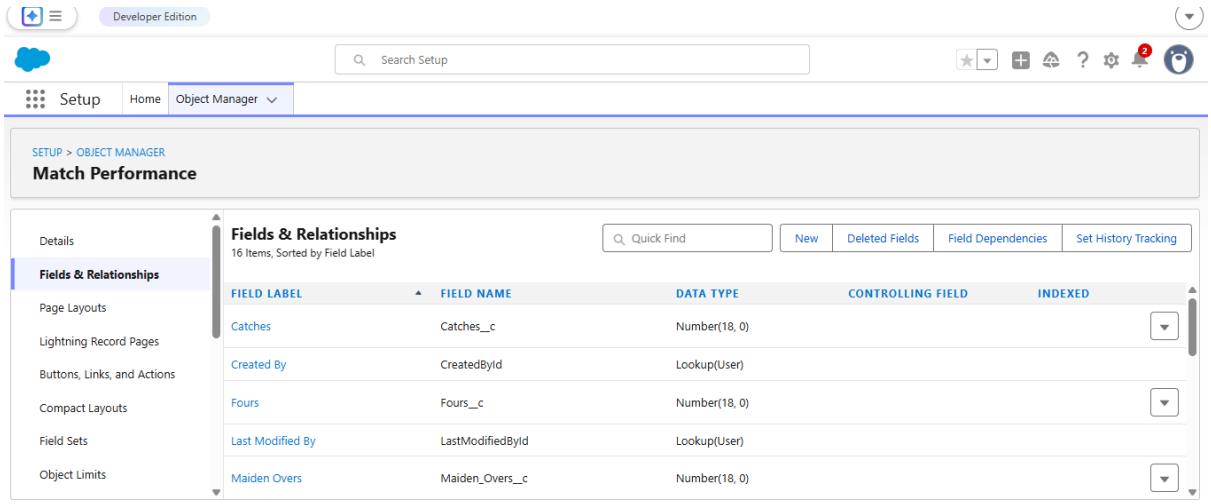


Milestone 5 : Fields & Relationships

Activity 1 : Create Custom fields for Player object

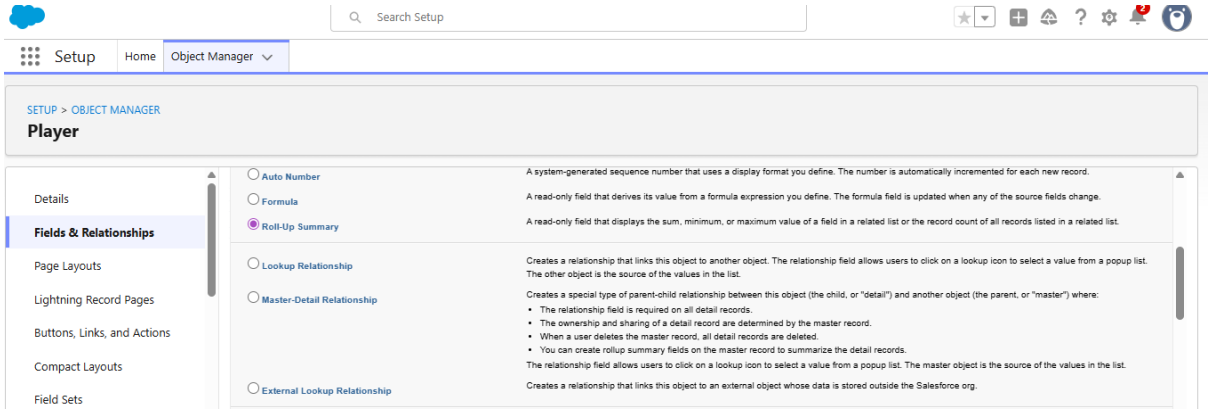


Activity 2 : Create Custom fields for Match Performance object



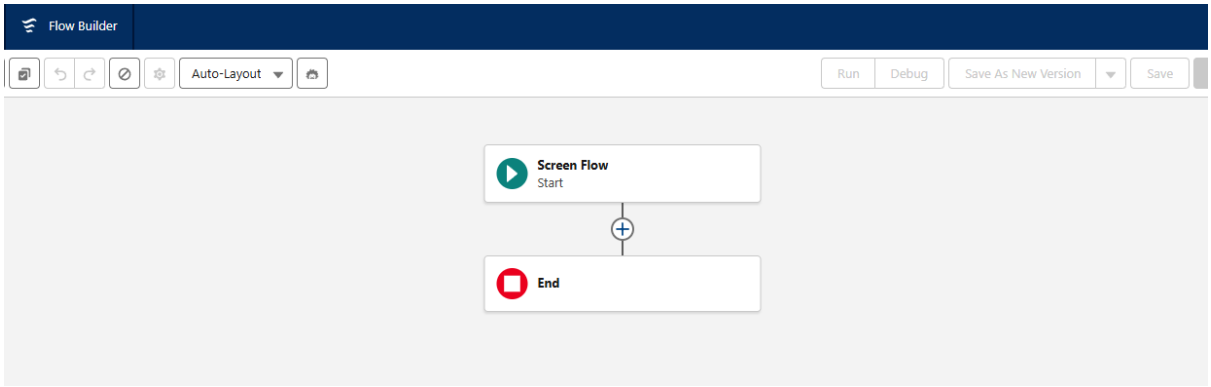
Milestone 6 : Roll-up Summary

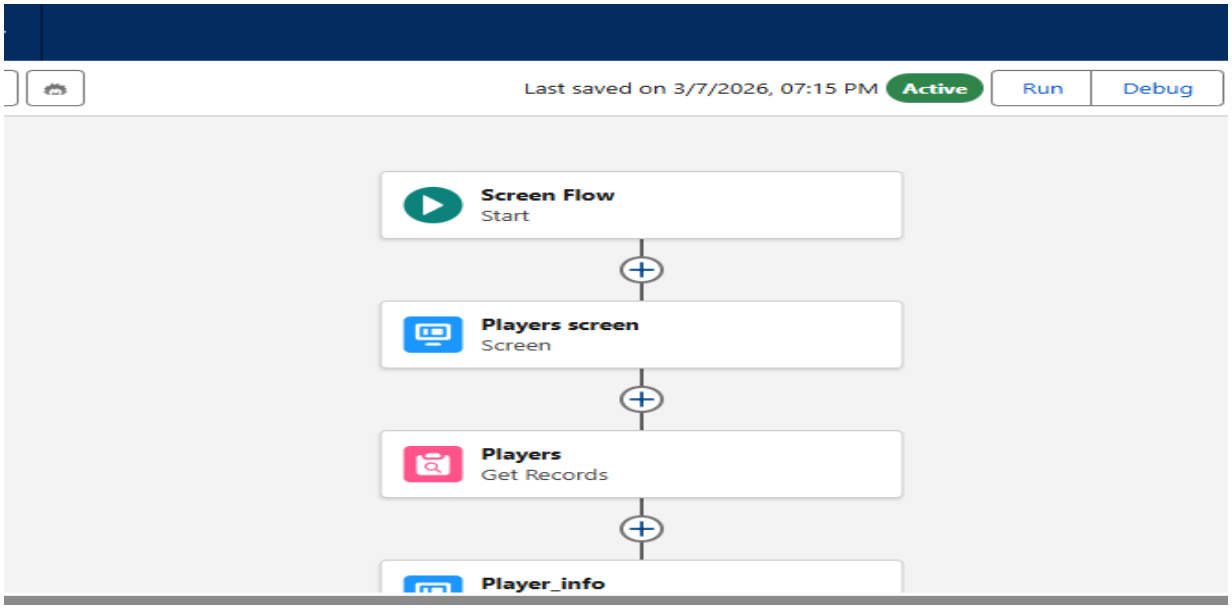
Activity 1 : Create Roll-up Summary for Player object.



Milestone 7 : Flows

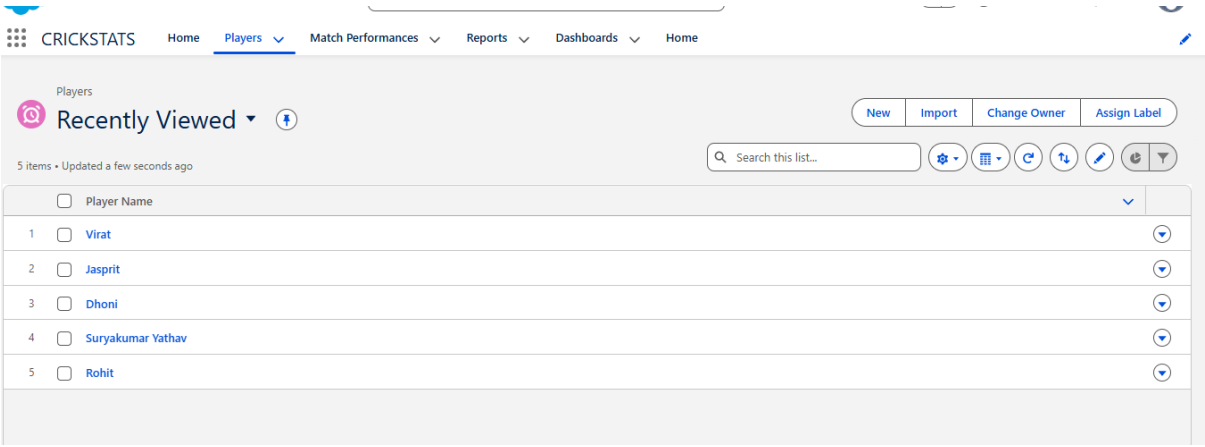
Activity 1 : Screen Flow



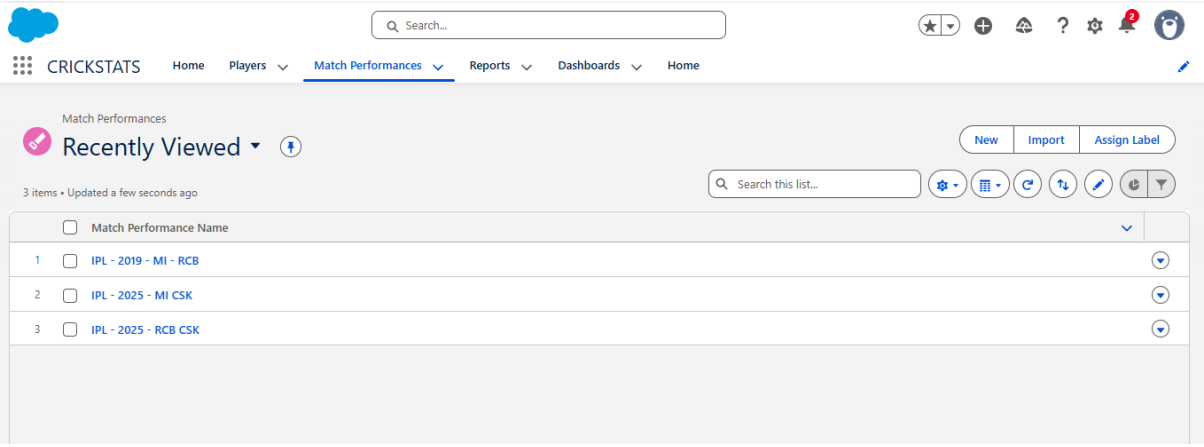


Functional & Performance Testing :

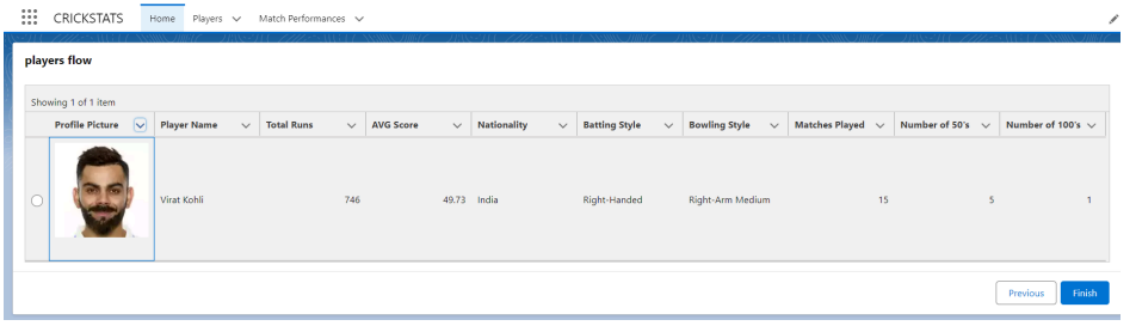
Players :



Match Perfomances :



Home Page :



Advantages :

- Centralized system
- Secure platform
- Scalable design
- Reduced manual work

Disadvantages :

- Requires Salesforce license
- Internet dependency
- Limited offline access

Conclusion:

CRICKSTATS successfully implements a cloud-based cricket performance tracking system using Salesforce. The system automates data management, improves reporting accuracy, and supports informed decision-making. The project demonstrates practical application of SDLC, Agile methodology, and CRM-based development.

Future Scope :

- Mobile application integration
- AI-based performance prediction
- Player ranking system
- Public statistics portal
- Multi-league support

Thank You
